

Metabolic health may play role in obesity-related cancers

February 7 2023

Hazard ratios (95% confidence interval) of all obesity-related cancers and

common cancer forms in 400 111 men according to combinations of metabolic health status and body mass index. Hazard ratios were calculated by use of Cox regression using age as timescale, adjusted for sex, baseline age, and smoking status and pack-years and stratified by cohort and date of birth. Normal weight: $18.5 \leq \text{BMI}$
