Zika cases in the U.S. territory of Puerto Rico have jumped to 436 so far this year.

Health Secretary Ana Rius says there are now 60 [pregnant women](#) infected with Zika and five possibly Zika-linked cases of a paralyzing condition known as Guillain-Barre syndrome. Experts are trying to determine if the mosquito-borne virus might sometimes trigger Guillain-Barre and microcephaly, in which babies are born with unusually small heads and sometimes brain damage. So far, two women with Zika have given birth to healthy babies, none with microcephaly.

Rius said Friday that she signed an administrative order requiring all medical insurance plans to cover contraceptive methods including hormonal
