

Pharmacists play key roles in cardiac disease management

9 March 2018

Management document, which outlines what they can do. Physician representatives review the document, and ensure that [pharmacist](#) management is based on guidelines, evidence-based medicine, and safe practices. Hospital pharmacists can also help as patients transition from hospital to discharge, spending time with patients prior to discharge and ensuring they understand their medication regimen. Community pharmacists also have a role to play, by providing blood pressure screenings, as well as counseling on lifestyle issues.

"It's important for a patient to understand their meds, as well as to understand why lifestyle issues, such as diet and exercise are important," Mary Curtis, Pharm.D., from Brema Pharmacy, said in a statement.
