

# High-flow O<sub>2</sub> therapy feasible for infants with bronchiolitis

22 March 2018

---

(HealthDay)—High-flow oxygen therapy may be more effective than standard oxygen therapy in preventing care escalation among infants with bronchiolitis treated outside an intensive care unit, according to a study published in the March 22 issue of the *New England Journal of Medicine*.

Donna Franklin, from Lady Cilento Children's Hospital in South Brisbane, Australia, and [colleagues](#) randomized infants (
