

MRI-guided Tx strategy not superior for rheumatoid arthritis

6 February 2019

(HealthDay)—A magnetic resonance imaging (MRI)-guided treat-to-target strategy is not associated with improved disease activity remission rates for patients with rheumatoid arthritis (RA) in clinical remission, according to a study published in the Feb. 5 issue of the *Journal of the American Medical Association*.

Signe Møller Bisgaard, M.D., Ph.D., from Slagelse Hospital in Denmark, and colleagues conducted a two-year multicenter trial at nine hospitals involving 200 [patients](#) with RA in clinical remission (disease activity score in 28 joints-C-reactive protein [DAS28-CRP]
