People with type 2 diabetes are at an increased risk for heart failure and many people have both diseases, which requires careful medical management.

A scientific statement from the American Heart Association and the

Heart Failure Society of America brings the management of both diabetes and [heart failure](#) into one document and describes new approaches to medications, lifestyle modifications as well as highlighting the importance of multi-disciplinary care that includes physicians, nurses, registered dietitians, social workers and other allied professionals.

The statement is published in the American Heart Association journal *Circulation*.
