

# France says pharma giant Sanofi could make rivals' COVID vaccines

15 January 2021

With a little help for its rivals

Sanofi, France's biggest pharmaceutical company, could help produce foreign-developed COVID-19 vaccines pending the launch of its own vaccine, which will not be ready for months, a government minister said Friday.

Industry Minister Agnes Pannier-Runacher told Radio Classique that vaccines developed by BioNTech, which partners with Pfizer, and Janssen, owned by Johnson and Johnson, were the most likely choices for Sanofi to lend a helping hand.

The world has been scrambling to develop and produce enough anti-COVID vaccines, with inoculation drives hampered by limited stocks of doses and logistical constraints.

Also on Friday a French government source said that it expected a "sharp fall" in deliveries of the BioNTech/Pfizer vaccine in coming weeks because of supply chain problems in Belgium.

France has already received 1.5 million doses of the vaccine, and was hoping for over half a million

more next week.

The delay will force an adjustment if the pace of vaccinations, the source said, but would not endanger the ongoing vaccine campaign.

France—which has been criticised for lagging behind neighbouring countries with its vaccine rollout—had high hopes that its national champion Sanofi would contribute to a first wave of coronavirus inoculations, but the company's vaccine will not be ready before the end of the year.

Pannier-Runacher said she had therefore begun talks with Sanofi to act as a sub-contractor for other firms while it completed its own COVID jobs.

"We are looking at this together with them," she said, "and they are examining with BioNTech on the one hand and Janssen on the other whether it would be possible."

Sanofi itself told AFP that it was evaluating "the technical feasibility of temporarily carrying out some production stages to support other makers of COVID-19 vaccines," without naming either BioNTech or Janssen.

Talks were still "at a very preliminary stage," it said.

Pannier-Runacher said the main question was whether Sanofi had the spare capacity to make the doses in three to five months, with active ingredients adding another a few months, in a process "that usually takes 12 to 18 months."

The minister rejected criticism of Sanofi's tardiness in developing its vaccine, saying the company was only "three months late" compared to its July target, and that its performance was still "extraordinary."

Delpharm, a French sub-contractor for the pharmaceutical industry, said in November that it would produce the BioNTech/Pfizer vaccine in its

factory in northwestern France.

Recipharm, another sub-contractor, will produce the vaccine developed by Moderna starting late February or early March, Pannier-Runacher said last week.

Government spokesman Gabriel Attal said Friday that any vaccines produced in France would be part of the total number of doses ordered by the European Union, and distributed in France as part of the national quota negotiated between EU members.
