

Helping children clean up their hand-washing skills

25 January 2021, by Mayo Clinic News Network

- Before you eat
- After you sneeze or blow your nose
- After you play or are in a public place
- After you use the bathroom
- Other ways to stop the spread of COVID-19 and [infectious diseases](#):
- Avoid contact with other people and practice social distancing
- Cover your mouth and nose while sneezing or coughing with your elbow
- Avoid touching your eyes, nose or mouth
- Clean and disinfect surfaces or objects

One of the best way to help prevent the spread of COVID-19, influenza and other infectious diseases is by washing your hands. It can be easy for children (and adults) to forget what it takes to wash well.

Here are a few tips to clean up your hand-washing skills:

Scrub your hands together with soap for 20 seconds using warm water. Cold water does not remove germs and oils as well as [warm water](#). Oils on your hand can hold bacteria and germs.

Sing the "ABCs" song twice to be sure you scrub long enough. The scrubbing motion with soap removes the germs.

Don't forget to wash your thumbs, between your fingers, your finger tips, the backs of your hands and even around your wrists.

There are times that it's especially important to wash hands:
