questions about whether they should be vaccinated.

According to data from the Kaiser Family Foundation, Republicans remain more likely to say "definitely not" to a vaccine, with 29 percent saying they will never be immunized, against five percent of Democrats and nine percent of independents.

One hundred million people in the United States are now fully vaccinated against COVID-19, White House pandemic response coordinator Jeff Zients said Friday.

"That's 100 million Americans with a sense of relief and [peace of mind](#) knowing that after a long and hard year they're protected from the virus, knowing their decision to get vaccinated protects not just themselves, but also protects their families, their friends and their communities," he said.

The country has distributed 237 million doses, and 55 percent of adults have now received at least one dose.

The US vaccination campaign got off to a shaky start in December, but the rate of immunization rose rapidly through spring.

The vaccination rate peaked in early April and is now slowing, since many people who wanted to receive vaccines have already received them.

Health groups are now attempting to help people who faced access barriers, or who still have
